

Expert analysis for improved productivity

When productivity is key, you want to know you're getting the performance your BOBST machine is capable of. **Job Analysis** ensures you're maximizing productivity by optimizing your machine's parameters on specific jobs. You simply contact your BOBST representative with key details of your machine and job. The experts at our BOBST Competence Centers analyze each job and generate a comprehensive report, containing recommendations on meeting your specific goals, be it boosting productivity, enhancing quality, reducing waste, or improving makeready time. As well as empowering operators, the results can assist you in generating more accurate cost estimates for new contracts

Features

Comprehensive reporting

- Full report of your machine's performance on a specific job
- Assessment of the maximum speed, time taken for job changes, and the optimum effectiveness
- True evaluation of the capacity levels of your machine

Detailed recommendations

- Customized analysis, tailored to your machine configuration and job
- Optimize box layout or box imposition on the sheet
- Recommendations to help achieve your specific goal

Benefits

Boost productivity

- Optimize machine use and increase productivity by up to 30%
- Reduce the time job changes take
- Reduce machine stoppages
- Improve job layout to increase productivity whilst reducing waste

Empower your team

- Enable operators to maximize your machine's capabilities
- Assist managers in daily tasks and improve cost estimates for quotes
- Gain experience in mastering more complex jobs

Specifications

Available for the following machines:
