

# Take control, minimize downtime

The PTT2 supervisor that Palletizers use were previously designed to work with the DOS-operating system, which has now become obsolete. To replace this technology, new Windows-based **PTT2R supervisor** software has been developed and will ensure that your machine continues to operate effectively. If this upgrade is not completed, there is a significant risk of lengthy downtime should the current system crash. To avoid the implications of unexpected downtime, an upgrade (with a lead time of up to 12 weeks plus 2 days processing) should be implemented at the earliest opportunity.

## Features

- Windows-based PTT2R supervisor software
- New SIMATIC MICROBOX PC
- Updated, BOBST customized software
- Optional remote troubleshooting connection
- Bespoke integration

## Benefits

### Customer confidence

- Implement the latest technology
- Improve system reliability
- Eliminate the risk of downtime

### Increase efficiency

- Reduce the risk of long and unexpected Palletizer downtime
- Improve efficiency and reliability with enhanced memory (10,000 jobs) and fast USB back-up
- Optimize your maintenance with optional PTT2R supervisor connection to Helpline Plus service

## Specifications

Relevant machines:  
FFG DRO lines including a palletizer with a PTT2 supervisor

Typical installation requirements:  
Maximum 12 weeks lead time  
Processed in 2 days (1x BOBST technician)
